SE1 REPORT OVERVIEW

SysMon: Private Infrastructure Monitor

Enterprise-grade orchestration and telemetry for homelabs and small business environments.

Cloud-like UX on Bare Metal

Delivering seamless management UI bridging the gap between raw hardware constraints and automated container orchestration.

- **Homelab Enthusiasts**
- **Small-Sized Businesses**

SYSTEM ARCHITECTURE

Three Core Modules

Frontend UI

Visual configuration monitoring interface.

Backend Core

Automated task orchestration telemetry.

Auth System

Tier-based granular access control.

CAPABILITIES

Infrastructure Governance

Container Orchestration
Visual compose builder generation.

Resource Groups
Hard CPU RAM limits via cgroups.

Storage Quotas
Bounded host directory bind-mounts.

Live Telemetry
Real-time hardware utilization tracking.

Visual Deployment Pipeline

From configuration to compliant deployment execution.

1

Select Image

Define repository tag.

2

Attach Governance

Assign Resource Groups.

3

Generate Compose

Auto-inject cgroup limits.

4

Execute Deploy

Stream real-time telemetry.

ACCESS CONTROL

Tier-Based Collaboration

- **Tier 1 Admins** Establish rigid hardware boundary profiles.
- **Advanced Deployments** Paste legacy docker-compose strings directly.
- **Tier 3 Users** Deploy safely within pre-approved boundaries.
